

(https://profile.intra.42.fr)

Remember that the quality of the defenses, hence the quality of the of the school on the labor market depends on you. The remote defences during the Covid crisis allows more flexibility so you can progress into your curriculum, but also brings more risks of cheat, injustice, laziness, that will harm everyone's skills development. We do count on your maturity and wisdom during these remote defenses for the benefits of the entire community.

SCALE FOR PROJECT PISCINE PYTHON DJANGO (/PROJECTS/42CURSUS-PISCINE-PYTHON-DJANGO) / DAY 08 (/PROJECTS/42CURSUS-PISCINE-PYTHON-DJANGO-DAY-08)

You should evaluate 1 student in this team

Git repository

git@vogsphere.msk.21-school.ru:vogsphere/intra-uuid-3a87ba5

Introduction

For the smooth running of this evaluation, please respect the following rules:

- Remain polite, kind, respectful and constructive whatever happens during this conversation. It's a matter of confidence between you and the 42 community.
- Highlight the potential problems you 've had with the work you're presented to the person or the group you're grading, and take the time to talk about and discuss those issues.
- Accept the fact that the exam subject or required functions might lead to different interpretations. Listen to your discussion partner's perspective with an open mind (are they right or wrong ?) and grade them as fairly as possible.
42's teaching methods can make sense only if peer-evaluation is taken seriously.

Guidelines

- You must clone the repository as follows:

```
git clone ~/d08
```

If the location is taken already, it must be freed before the clone.

- You must only evaluate what you will find in the student's or group's GiT repository.
- Take the time to check that the GiT repository matches the student or group and the project.
- Double check that no malicious alias was used to mislead you and make you grade something different from the official repository content.
- If a script supposed to help evaluate the exam is supplied by either side, the other side will have to strictly check it to avoid nasty surprises.
- If the evaluating student has not yet taken this project, they will have to read the exam subject in its entirety before starting the evaluation.
- Use the flags available on this grading system to signal an empty or non-functional project, a norm flaw, cheating, etc. In that case, evaluation stops and final grade is 0 (or -42 if it's a cheating problem). However, if it's not a cheating problem, you are invited to keep talking about the work that has been done (or not done, as a matter of fact) in order to identify the issues that lead to this stalemate and avoid it next time.
- You must stop grading when one exercise is not correct, even if the other ones are.

 subject.pdf (<https://cdn.intra.42.fr/pdf/pdf/22320/en.subject.pdf>)

Foreword

This section is dedicated to the evaluation start and the checking of prerequisites. It's not graded, but if something's wrong or a condition is not met, here or anytime during the evaluation, the grade is 0 and a flag can be ticked if necessary.

Observing the instructions

- The repo contains the evaluated student's or group's work.
- The evaluated student or group can explain their work anytime during the

evaluation.

- General and specific instructions of the day will be observed during the whole evaluation.

✓ Yes

✗ No

Python-Django D08 training

- If you find an error in an exercise, the whole exercise is incorrect. No half-measure, no "slight error". The work is either perfect, either not. - Display of the pages must be managed: no strange behaviour, no special character (no accent) the display would not manage, etc. We want clean, or beyond.

Exercise 00 A reusable application.

- IMPORTANT: The DEBUG variable is set on False in the repo.

- The project contains a requirements.txt along with its dependancies at its root. They can be installed in a virtualenv. Build and install the application containing the required functionalities.

Carry out the migrations and the collectstatic.

- Temporarily change the value of the DEBUG variable to True.

- The manage.py utility development server can be launched with error once it's been installed.

- Once the development server runs, you can access a homepage from the browser at the following address: "http://127.0.0.1:8000".

- There is a form with a field to submit an image and a field to give the image a title.

- The background image is present and the uploaded images appear as they are uploaded, along with their titles.

The exercise is incorrect if one of the requirements is not perfectly met.

✓ Yes

✗ No

Exercise 01 Serve the project.

- Set the DEBUG variable back to False. This setting will remain for the same for the rest of the days.

- Start Nginx and the wsgi server you chose. Each server must run in the background.

- Both servers launch properly. You can access the page in the browser (If the images don't appear, it's ok for this exercise).

The exercise is incorrect if one of the requirements is not perfectly met.

☒ Yes

☐ No

Exercise 02 With " STATIC" files.

- The background image and the other STATIC files are correctly served by Nginx.

The exercise is incorrect if one of the requirements is not perfectly met.

☒ Yes

☐ No

Exercise 03 With " MEDIA" files.

- Images submitted by the visitor appear as they are uploaded.

The exercise is incorrect if one of the requirements is not perfectly met.

☒ Yes

☐ No

Exercise 04 In HTTPS.

- Website is accessible in HTTPS.

The exercise is incorrect if one of the requirements is not perfectly met.

☒ Yes

☐ No

Ratings

Don't forget to check the flag corresponding to the defense

☒ Ok

 Empty work

 No author file

 Invalid compilation

 Norme

 Cheat

 Crash

 Forbidden function
