About

Introduction

The methodology of School 21 makes sense only if peer-to-peer assessments are done seriously. This document will help you to do it properly.

- Please stay courteous, polite, respectful, and constructive in all communications during this assessment. The bond of trust between community 21 and you depends on it.
- Highlight possible malfunctions of the work done by the person and take the time to discuss and debate it.
- Keep in mind that sometimes there can be differences in interpretation of the tasks and the scope of features. Please stay open-minded to the vision of the other.

[Dashboard](#)[Projects](#)[Calendar](#)[School](#)[Internships](#)[Useful](#)

- Meticulously check that nothing malicious has been used to mislead you and have you assessed something except the content of the official repository.
- If you have not finished the project yet, it is compulsory to read the entire instruction before starting the review.
- Use the special flags in the scale to report an empty or non-functional solution, as well as a case of cheating. In these cases, the assessment is completed and the final grade is 0 (or, in a case of cheating, -42). However, except for a case of cheating, you are encouraged to continue reviewing the project to identify the problems that caused the situation in order to avoid them for the next assessment.
- You must stop giving points from the first wrong exercise even if the following exercises are correct.

Preliminaries

Respect the rules:

- The repository contains the work of the student (or group).
- The student is able to explain their work at any time during the assessment.
- The general rules are respected throughout the assessment.

Main part

Exercise 00 – File Signatures

- Are there at least 10 format types in signatures.txt file?
- Does the system form the result based on the file content rather than name?
- Does signatures.txt file content have a format specified in the task?
- Add your extension to signatures.txt and check the program operation using your own file. Is the result correct?

[Dashboard](#) [Projects](#) [Calendar](#) [School](#) [Internships](#) [Useful](#)

- Will the program produce the similarity measure equal to 1 for identical files?
- Will the program output the similarity measure equal to 0 if one of the files is empty?
- Does the program code ensure uniqueness of dictionary elements?
- Does the program create dictionary.txt file?

Exercise 02 – File Manager

Use your set of files to check all items.

- Can the program handle relative paths within the current folder?
- Does the renaming function work correctly?
- Does the displacement function work correctly?
- Does the system display file sizes correctly?
- Does cd command output the new current directory name?
